Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

probable DNA-binding protein - garden pea
c;Species: Pisum sativum (garden pea)
c;Date: 23.Apr.1999 #sequence_revision 23.Apr.1999 #text_change 01-Dec-2000
c;Accession: T06584; T06582
F;Sato, N.; Kazuno, A.A.; Ohta, N.; Ohshima, K.
submitted to the EMBL Data Library, June 1996
A;Bescription: Identification of a novel family of DNA-binding proteins with two AT-hook
A;Reference number: 215774
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          υ,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 728,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     65;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Length 918;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 11, Application US/09041886

Patent No. 6235872

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Bredesen, Dale E.

APPLICANT: Rablaadeh, Sharroz

TITLE OF INVENTION: Polypeptides and Methods of Use

TITLE OF INVENTION: Polypeptides and Methods of Use

TITLE OF SEQUENCES: 72

CORRESPONDENCE ADDRESS:

ADDRESSEE: Campbell & Flores LLP

STREET: 4370 La Jolla Village Drive, Suite 700

The patent relates to polynucleotides encoding 35 plant transcription factors which may be used to modify phenotype associated with a plant's sugar sensing characteristics and increasing yield when their expression evel is altered. Sugars are central regulatory molecules that control aspects of physiology, metabolism and development. Therefore the CDNAs and proteins of the invention are useful for modifying the growth and espiration, starch and sucrose synthesis and degradation, pathogen response, wounding response, cell cycle regulation, pigmentation.

C feaponse, wounding response, cell cycle regulation, pigmentation, relationships in seeds, tubers, roots, and other storage organs leading to an increase in yield. The transcription factor polynucleotides and collypeptides may be used to alter the structure and developmental characteristics of plants such as sugarcane, turf, banana, blackberry, cice, oilseed, sunflower, alfalfa, sugarcane, turf, banana, blackberry, coffee, cucumber, eggplant, grapes, honey dew, lettuce, mango, melon, cohon, papaya, peas, peppers, pineapple, spinach, squash, sweet corn, cobacco, tomato, watermelon, rosaceous fruits and/or vegetable brassicas.

The present sequence is a homolog of Arabidopsis thaliana transcription
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .,

cenes with similarity to proteins in the databases are described as
'putative', '-like' or 'similar to'. Genes that have EST
similarity but no significant protein similarity are described as
'unknown proteins'. Genes that are annotated based only on gene
prediction software are described as 'hypothetical proteins'.
The software programs used to predict genes include: Grail
(Informatics Group, Oak Ridge National Laboratory,
http://compbio.ornl.gov/section/index.html), GENSCAN (Chris Burge,
http://compbio.ornl.gov/section/index.html), Fexa (V.Solovyev)
ttp://ground.c.stanford.edu/-chris/GENSCANW.html), Fexa (V.Solovyev)
NetplantGene (S.M. Hebsgaard, et al., CBS, Technical University of
Denmark,htp://www.cbs.dtu.dk/NetPlantGene.html).

Genes were identified by a combination of three methods: Gene prediction programs including GRAIL (ftp://arthur.epm.orn.jcov/pub/xgrail), Genefinder (Phil Green, University of Washington), Genscan (Chris Burge, Durio.catalford.edu/GENSCARW.html), and NetplantGene (http://www.cbs.dtu.dk/services/NetGene2/), searches of the complete sequence against a peptide database and plant EST databases at TiGR, and manual curations based on those analyses. Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits Genes without significant peptide similarity but with EST similarity are named as 'unknown' protein or EST similarity are named as 'unknown' protein or EST similarity are named as 'unknown' protein or EST similarity are named as 'hypothetical' proteins. Genes without protein or EST similarity. That are predicted by two or more gene prediction programs over most of their length are annotated as 'hypothetical' proteins. Genes encoding tRNAs are predicted by tRNAscan-ES (Sean Eddy, here). http://genome.wustl.edu/eddy/tRNAscan-SE/). Simple repeats were identified by repeatmasker (Arian Smit, http://ftp.genome.washington.edu/RM/RepeatMasker.html). Genes are numbered from the top to bottom of the chromosome.

We thank the CSHL/WashU/ABI consortium for sequencing BAC clones F6P23, F5J6, T17A5, and T13L16, the ESSA group for sequencing clone F13D4, and Scott Jackson, Jiming Jiang, Klaus Meyer, Eric Richards and Satoshi Tabata for helpful assistance. In addition, we would like to thank the TIGR Bioinformatics Department, especially Lixin Shou, Hanif Khalak, Michael E. Heaney, Lily Fu, Feng Liang, Jeremy Peterson, Michael Holmes, and Delwood Richardson for software and database support.

This work was supported by the National Science Foundation, Department of Energy and the US Department of Agriculture.

Arabidopsis thaliana chromosome II section 242 of 255 of the complete sequence. Sequence from clones T14P1, F4L23. AC002387, 2 GI:6598365
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Submitted (09-MAR-2000) The Institute for Genomic Research, 9712 Medical Center Dr., Rockville, MD 20850, USA On Dec 17, 1999 this sequence version replaced gi:2583106. The sequence and annotation of chromosome 2 were merged from those of the individual clones on this chromosome after removing overlaps. For detailed information, please see the TIGR web site (http://www.tigr.org/tdb/at/at.html).

Genes were identified by a combination of three methods: Gene prediction programs including GRAIL (ftp://arthur.epm.orni.gov/pub/xgrail), Genefinder (Phil Green, University of Washington), Genscan (Chris Burge, http://gnomic.stanford.edu/GENSCANW.html), and NetplantGene (http://www.cbs.dtu.dk/services/NetGene2/), searches of the complete sequence against a peptide database and plant EST databases at TIGR, and manual curations based on those analyses. Annotated genes are named to indicate the level of evidence for

                       after the database hits. Genes without significant peptide similarity but with EST similarity, that are named as 'unknown' proteins. Genes without protein or EST similarity, that are predicted by two or more gene prediction programs over most of their length are annotated as 'hypothetical' proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy. http://genome.wustl.edu/eddy/tRNAscan-SE). Simple repeats were identified by repeatmasker (Arian Smit,
their annotation. Genes with similarity to other proteins are named
                                                                                                                                                                                                                                                        http://ftp.genome.washington.edu/RM/RepeatMasker.html). Genes are
                                                                                                                                                                                                                                                                                                                                       We thank the CSHL/WashU/ABI consortium for sequencing BAC clones
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                complement(join(<6393 .6470,6586 .6663,7082 .7157,7248 .7296,7872 .8004,8099 .8260,8382 .>8495))

Genes were identified by a combination of several methods: Gene prediction programs including Genscan+ (Chris Burge, http://CCR-081.mit.edu/GENSCAN.html), GeneMarkHMM (Mark Borodovsky, http://GCR-081.mit.edu/GENSCAN.html), GeneMarkHMM (Mark Borodovsky, http://genemark.blology.gatech.edu/GeneMark/), GilmmerA (a varlant of GlimmerM, see Mihaela Pertea, http://www.tigr.org/softlab/gilmmerm_htm/gilmmerm.html, and GeneSplicer (Mihaela Pertea and Steven Salzberg, contact mpertea@tigr.org), searches of the complete sequence against a peptide database and the plant EST database at TiGR (http://www.tigr.org/tdb/tgi.shtml). Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypothetical proteins. Genes encoding tRNAs are predicted by tRNAscan SE (Sean Eddy, http://genome.wuslington edu/RW/Repeatmasker (Arian Smit, http://ftp.genome.washington edu/RW/Repeatmasker html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /translation="MARLLFRLLQEANSTSPAEASPPFNSDLVLILAVLLCALTCIIG
